Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: No prior art of record discloses or fairly suggest a self authenticating article comprising: a substrate with a printable surface portion; a lenticular lens having a predetermined lens frequency and configured for optically decoding indicia viewed therethrough and attached to the substrate so that the lens positioned to overlie the printable surface to decode encoded indicia printed thereon; and the indicia comprising raster lines with a line frequency that is a multiple of the lens frequency, and wherein the raster lines forming a source image with deviations corresponding to the encoded

hidden indicia; and wherein the indicia is decodable through the use of a decoder having a decoding frequency corresponding to the predetermined line frequency; and including all of the other limitations of the independent claims.

Taylor et al as modified by Drinkwater et al is the closest prior art that is similar to applicant's invention. However, Taylor et al does not disclose wherein the indicia printed on the surface portion of the substrate comprises a plurality of raster lines having a line frequency that is a multiple of the lenticular lens frequency.
